TO WHOM SO EVER IT MAY CONCERN

This is to certify that M/s. SAS Powertech Pvt Ltd provided end to end solution to optimize our KVAh billing. The solution implemented by them has been successfully working in our Bhosari plant since last 06 Months.

SASPPL has conducted Reactive Power Compensation study & designed the solution for our facility which had fluctuating welding load. The plant has a rooftop solar plant too which was further adding to load variations. The facility has been able to maintain Power factor 0.995 & above without any HT feedback for such variable conditions.

We would like to mention that SASPPL took complete responsibility right from study, designing to implementation. With their inhouse expertise and knowledge of the kVAh billing we got prompt response and quick service from the Team of SASPPL.

We would recommend them as a technically competent agency having good understanding of the subject and equally good sourcing & implementation team. We wish them great success for their future endeavors and business.

Thanking you,

For Lumax Metallics Pvt. Ltd.
